

# SEIZURE FIRST AID

## Tonic Clonic Seizure

*Convulsive seizure with loss of consciousness, muscle stiffening, falling, followed by jerking movements.*

1

**Time the seizure.**

**Protect from injury**, quickly remove any hard objects that could cause injury.

**Protect the head** as best you can - place something soft under the head.

**Do not** attempt to restrain the person or to stop the jerking.

**Do not** put anything in the mouth.

2

**Gently roll the person onto one side** as soon as it is practical to do so. This will help keep the airway clear.

**Stay with the person** until the seizure ends naturally.

3

**Calmly talk** to the person until they regain consciousness. Let them know where they are, that they are safe and that you will stay with them while they recover.

## Complex Partial Seizure

*Non-convulsive seizure with outward signs of confusion, unresponsiveness or inappropriate behaviour. Can be mistaken for alcohol or drug intoxication.*

- During a complex partial seizure you may need to gently guide the person past obstacles and away from dangerous places.
- As the seizure finishes, calmly talk to the person and ask if they are OK.

*In the event of a seizure follow instructions in the individual's seizure care plan. However if you do not know the person, or there is no seizure care plan:*

### Call an ambulance – 000

- ✓ If the seizure lasts more than **5 minutes** or a second seizure quickly follows.
- ✓ If the person remains non-responsive for more than **5 minutes** after the seizure stops.
- ✓ If the person is having a greater number of seizures than is usual for them.
- ✓ If the person is injured, goes blue in the face or has swallowed water.
- ✓ If the person is pregnant.
- ✓ You know, or believe it to be, the person's first seizure.
- ✓ You feel uncomfortable dealing with the seizure.
